

XVirtual

Xvirtual

INTERCOM USER APP FOR PC, IPAD OR IPHONE WITH WIRED OR WIFI CONNECTIVITY.

Xvirtual, an application for iOS and Windows devices with the same functionality that can be found in a 16 keys Intercom Panel.

The application can be installed on a PC, with windows operating system, turning it into a User Panel and part of your Intercom System, only requiring a simple Ethernet connection.

In the same way, it can turn any Apple iPhone, iPod or iPad device, with iOS operating system, into a Wireless Intercom Panel. Just connect it to a Wi-Fi network providing access to a Conexia or Crossnet Intercom System to build your Wireless Beltpack System.

OTHER FEATURES

Compatible with Conexia and Crossnet matrixes.

With Conexia: 20 Hz to 7 KHz bandwidth. Up to 12 terminals per XC 19 card.

With Crossnet: 20 Hz to 4 KHz bandwidth. Up to 20 terminals per matrix.

Muting function.

Key functions. Functions have been defined for each key to allow for multiple operating modes, and signaling regarding the communication status is provided at each one.
